

We also appreciate that the Committee did not include any restrictions on FDA's authority under the TCA in its FY 2018 bill and urge the Committee to not restrict this authority in its FY 2019 bill. Regrettably, the House Agriculture-FDA Appropriations bill approved by the House Appropriations Committee last week would substantially weaken FDA's authority over certain tobacco products. It would completely exclude "large and premium cigars" from FDA oversight. We agree with FDA's conclusion in 2016 that there is no appropriate public health justification for exempting premium cigars from FDA oversight. FDA's scientific review found that all cigars pose serious negative health risks, including about 9,000 premature deaths a year, and that all cigars are potentially addictive. We also are concerned that the rider defines "large and premium cigars" so broadly that it would create a loophole that invites tobacco companies to modify their products to qualify for this exemption, including cheap, machine-made, flavored cigars that appeal to youth.

The House bill also would exempt all other cigars and pipe tobacco that were on the market prior to April 25, 2014 from a scientific review of their health risks and whether they appeal to kids. By eliminating the obligation of manufacturers to submit these products for review by FDA, the provision would make it much harder for FDA to address concerns about tobacco companies' use of kid-friendly flavors.

In addition, the House bill would make it easier for manufacturers to bring new tobacco products to market in the future. By changing which products can serve as "predicate products," it would enable more e-cigarettes, cigars, and other tobacco products to be eligible for a less rigorous "substantial equivalence" review by FDA instead of a full review of these products' effect on public health.

We urge the Committee to continue to exclude any restrictions on FDA's authority over tobacco products from this appropriations bill.

Tobacco use remains the leading preventable cause of death in the United States and is responsible for more than \$170 billion in health care costs every year. More than 16 million Americans currently suffer from smoking-caused illness and more than 480,000 die each year from cigarette smoking and exposure to secondhand smoke. With the support of your Committee, the FDA will be able to continue its work to reduce tobacco use and the health and economic toll it takes on our nation.

Sincerely,
