FEDERAL FUNDS (FY19)

Source: California Department of Public Health

IMPACT OF POTENTIAL CUTS TO FEDERAL FUNDING

- Increased rates of infectious disease due to limited capacity to protect people from infection and respond to communicable disease outbreaks
- Delay disease outbreak response and investigation activities resulting in increased illness and death
- Reduce or eliminate the capacity to analyze public health data. The loss of this capacity limits the ability to make informed decisions about disease prevention and health planning.
- Reduced capacity to respond to public health emergencies putting more people at risk of harm due to natural disasters and health threats due to terrorism
- Reduced capacity to develop population-wide policy solutions to address health issues

Mission: To optimize the health and well-being of the people in California.

CDC 2018 OPIOID OVERDOSE CRISIS

FUNDING

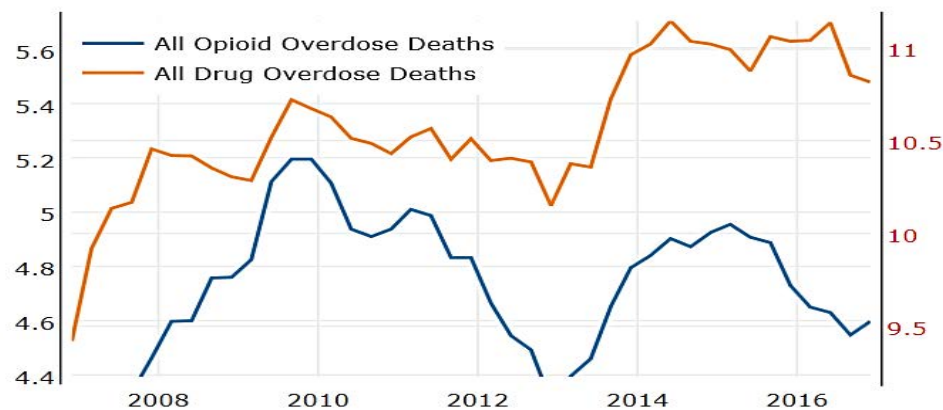

Year 1 (FY19) \$3,611,085

This funding will support California in working to prevent opioid-related overdoses, deaths, and other outcomes. It will advance the understanding of the epidemic and scale-up prevention and response activities, including improving the timeliness of data. Specifically, the grant will help:

- Link multiple data sources and develop a prototype for a near real-time/real-time interoperable data system.
- Enhance the existing California Reportable Disease Information Exchange surveillance system for ongoing reporting of opioid overdoses/deaths.
- Provide Physician and Pharmacist education, including OB/GYNs.
- Identify sub-regional areas at high risk for opioid overdoses and blood borne infections associated with non-sterile drug injection.

OPIOID STATISTICS

CA: Total Population 12-Month Moving Avg. (Age-Adjusted)

UNITED HEALTH FOUNDATION RANK

Strengths:

- Low prevalence of obesity
- Low occupational fatality rate
- Low infant mortality rate

Areas for Improvement:

- High levels of air pollution
- Low Tdap immunization coverage among adolescents
- Low immunization coverage among children
