## FEDERAL FUNDS (FY15)

Source: ASTHO 2017 Profile

### IMPACT OF POTENTIAL CUTS TO FEDERAL FUNDING

- Higher rates of preventable injuries such as falls, burns, or motor vehicle accidents due to cuts in prevention programs that keep us safe at work and at home
- Cut or eliminate public health programs that help individuals stay healthy and prevent disease leading to lost productivity due to illness and increased health care costs when they get sick
- Reduced hours, location closures, and potential elimination of key public health preventive services such as childhood immunizations, health screenings, influenza vaccination, leading to increases in preventable diseases
- Reduce or eliminate the capacity to analyze public health data. The loss of this capacity limits the ability to make informed decisions about disease prevention and health planning.
- Reduced capacity to respond to public health emergencies putting more people at risk of harm due to natural disasters and health threats due to terrorism

## CDC 2018 OPIOID OVERDOSE CRISIS FUNDING

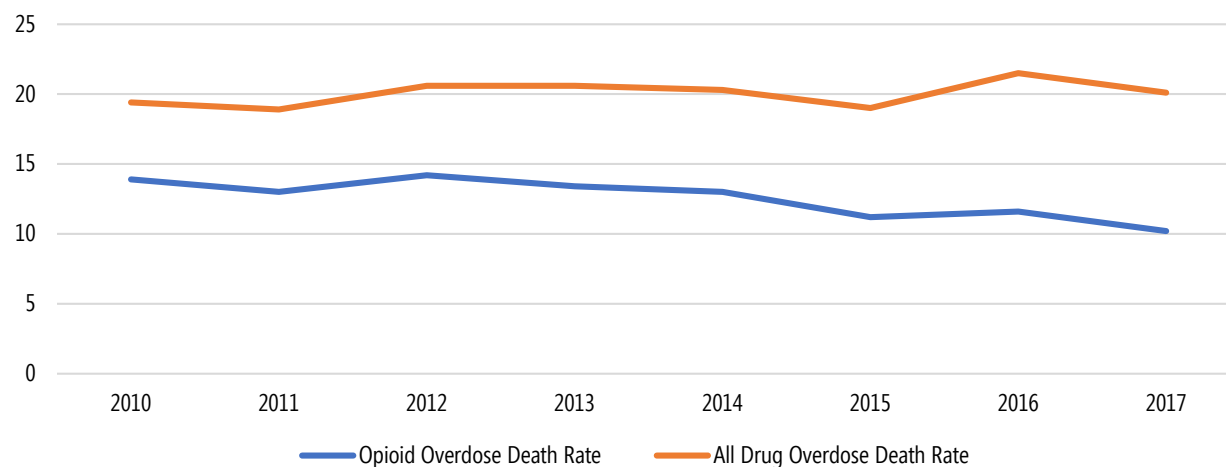

**Year 1 (FY18)** \$4,123,975.67 for 9/1/18 – 8/31/19

This funding will support Oklahoma in working to prevent opioid-related overdoses, deaths, and other outcomes. It will advance the understanding of the epidemic and scale-up prevention and response activities, including improving the timeliness of data. Specifically:

- Support opioid epidemic response events in four high burden communities around the state
- Improve outreach and linkages to care and services in targeted areas
- Enhance the information and referral services and expand public education and awareness campaigns
- Provide clinicians, especially those in rural areas, with education and training on pain management best practices, addiction, and medication-assisted treatment, and providing specialty care to patients locally
- Enhance opioid overdose surveillance, data linkages, and information dissemination
- Conduct a statewide vulnerability assessment to identify areas at high risk for opioid overdoses and blood borne infections (e.g., HIV, hepatitis B, hepatitis C)

## OPIOID STATISTICS

OK: Overdose Death Rates per 100,000 Population (Age-Adjusted)

Source: Kaiser Family Foundation's State Health Facts

## UNITED HEALTH FOUNDATION RANK

**Strengths:**

- Low prevalence of excessive drinking
- High rates of mental health providers
- Low prevalence of low birthweight

**Areas for Improvement:**

- High percentage of uninsured population
- High cardiovascular death rate
- High prevalence of physical inactivity
