

May 4, 2018

The Honorable Robert Aderholt
 Chairman
 Subcommittee on Agriculture, Rural
 Development, Food and Drug
 Administration, and Related Agencies
 Committee on Appropriations
 United States House of Representatives
 Washington, D.C. 20515

The Honorable Sanford Bishop
 Ranking Member
 Subcommittee on Agriculture, Rural
 Development, Food and Drug
 Administration and Related Agencies
 Committee on Appropriations
 United States House of Representatives
 Washington, D.C. 20515

Dear Chairman Aderholt and Ranking Member Bishop:

As your Subcommittee moves forward with the FY 2019 Agriculture, Rural Development, Food and Drug Administration, and Related Agencies Appropriations bill, we urge you to approve the authorized level of user fees for the Food and Drug Administration’s (FDA) oversight of tobacco products and to oppose any effort to limit the authority that Congress granted the FDA under the Family Smoking Prevention and Tobacco Control Act (TCA).

Prior to 2009, tobacco products were virtually unregulated even though they were known to be highly addictive and dangerous to health. Congress, on a bipartisan basis, recognized that tobacco products should be overseen by an agency with expertise in assessing health risks and experience promulgating science-based regulation. The TCA gave the Center for Tobacco Products at FDA the authority to oversee the manufacturer, marketing, distribution and sale of tobacco products in a manner appropriate for the protection of public health.

We appreciate that every FDA appropriations bill approved by Congress since the enactment of the TCA has contained the full authorized amount of user fees. This year, we urge your Subcommittee to approve the \$712 million in user fees that the TCA authorizes FDA to collect and spend for tobacco-related activities for FY 2019.

We were disappointed that your Subcommittee included restrictions on FDA's authority under the TCA in its FY 2018 bill and urge the Subcommittee to not restrict this authority in its FY 2019 bill. As you know, two policy riders in last year's House Agriculture-FDA Appropriations bill would have substantially weakened FDA's authority over certain tobacco products. One provision would have exempted thousands of e-cigarettes and cigars now on the market from a scientific review of their health risks and whether they appeal to kids. By eliminating the obligation of manufacturers to submit these products for review by FDA, the provision would have made it much harder for FDA to address concerns about tobacco companies' use of kid-friendly flavors, made the thousands of sweet-flavored products that entered the marketplace in recent years the accepted industry standard by which future products would be evaluated, and left important questions about the effect of e-cigarettes on public health unanswered. Regrettably, FDA has significantly delayed enforcement of this product review requirement. The House rider would have gone beyond this delay and permanently exempted thousands of tobacco products from a product review by FDA.

The other provision would have completely excluded "large and premium cigars" from FDA oversight. We agree with FDA's conclusion in 2016 that there is no appropriate public health justification for exempting premium cigars from FDA oversight. FDA's scientific review found that all cigars pose serious negative health risks, including about 9,000 premature deaths a year, and that all cigars are potentially addictive. We also are concerned that the rider defined "large and premium cigars" so broadly that it would have created a loophole that invited tobacco companies to modify their products to qualify for this exemption, including cheap, machine-made, flavored cigars that appeal to youth. We appreciate that the FY 2018 Consolidated Appropriations Act did not include these provisions and urge the Subcommittee to not include restrictions on FDA's authority over tobacco products in its FY 2019 appropriations bill.

Tobacco use remains the leading preventable cause of death in the United States and is responsible for more than \$170 billion in health care costs every year. More than 16 million Americans currently suffer from smoking-caused illness and more than 480,000 die each year from cigarette smoking and exposure to secondhand smoke. With the support of your Subcommittee, the FDA will be able to continue its work to reduce tobacco use and the health and economic toll it takes on our nation.

Sincerely,
